

## Ridgid Micro Explorer Inspection Camera

The new RIDGID SeeSnake micro Explorer Inspection Camera takes the RIDGID product to the next level. With the ability to record the images you see directly on to an onboard SD camera as images or video. The clever technology onboard also allows you to set the camera to automatic self-levelling so which ever way up the camera head is the image on the screen shows the true level image.

The ability to view the images and to zoom in on the image or pan left and right within the recorded image also allows the operator to fault find on site.
